

# AMARILLO JOBBERS AND MANUFACTURERS

## SCHOOL BONDS ARE VOTED BY PORTALES

Special to The News.  
PORTALES, N. M., Aug. 31.—The school bond election, which was held in Portales Saturday, resulted in a majority for the bonds. This \$50,000 bond, with the \$19,000 accumulated fund on hand, will equip Portales in schools not to be surpassed in the state.

## BAND CONCERT AT PORTALES POPULAR

Special to The News.  
PORTALES, N. M., Aug. 31.—Mr. and Mrs. Howard White spent a week on their way home from California, Utah and Colorado, and will stop and spend a few days in Amarillo with the chief dispatcher of the Santa Fe, who is an old friend of Mr. White's, who is now in the railroad service at Broken Arrow, Okla.

## FACTORY DEVELOPMENT HINGES PARTLY UPON WATER SITUATION

If Amarillo expects to reap the results commercially that are due her as a city, she must make preparations to solve the water problem and make a reasonable degree of speed, declared an Amarillo business man yesterday. Continuing, he said: "Many of us are especially interested in seeing the development of this city as a great jobbing and manufacturing center. Have you ever dealt with a business man planning to locate a factory? If you have then you can appreciate some of the things that he is interested in."

**Asks About Other Things.**  
"A manufacturer is interested in many other things than a convenient site. Water is one thing that he considers of paramount importance, for he may need quantities in his factory, and he does not care to have any delays because of the water situation. "Of course, he is interested in cheap fuel and, thank goodness, Amarillo has that in abundance. The natural gas furnishes the fuel, and we have been talking about the wonderful opportunities for factories in using natural gas. But our cooperation with the manufacturer must extend beyond the

supplying of adequate fuel at a reasonable rate. "Ample water will assure him lower insurance rates as well as other advantages."

**People Ask About Water.**  
"Did you ever notice how often you are asked this question by strangers, 'How's your water? Do you have good water, and in abundance?'"

"Without doubt the water from the wells of the Panhandle region is unequalled in the world. But you must get that water to a city to make it serve its purpose. "Many cities have created unfavorable impressions because of the poor water. Doubtless you can recall the names of cities in Oklahoma which are infamous for their poor water supply. "Amarillo can get the water. It is now just a matter of using common sense methods in going about getting water. Many surveys have been made during the past few years, and much information has been compiled."

**More Investigation Needed.**  
"Further investigation is being made. I understand, and possibly even still more should be made by outside engineers who have had part in locating water supplies for other cities. Their investigation in these fields should be very valuable in making comparisons about local conditions."

"Amarillo people should have it brought to their minds constantly that the city needs more water. They should be told of the water situation so much that the time will come before long when they will demand a system that can adequately supply the city. "There is no doubt but that we are right now the development of the city right now through our water situation. The hindering of development may not be very much right now, but we must look ahead a few months and a few years."

**Will Retard Growth.**  
"Don't you think that we won't notice things here within two or three years if we don't get an increased supply of water. Just a few weeks ago we were asked to go easy on the use of water for a few days, and that was during a relatively wet summer. Should there be a repetition of the summers of a few years ago, there is no question but that we would have a genuine problem facing us. "The water situation is serious enough today, and the progressive citizen doesn't want to wait a few years. He shouldn't wait for the other fellow to lead in water agitation. Let us not 'let George do it.' If we act talk water, we will be doing a civic duty, and we will get it."

## NORTH PLAINS TRUCK LINE IS GETTING NEARER TO REALITY

Continuation of efforts in behalf of the truck line to the North Plains is being made, and it is expected that definite announcements will be made shortly. The truck line is being sponsored by the newly organized Amarillo Jobbers' and Manufacturers' Association.

Business men, it is understood, are pledging support of shipments over the line, and it is declared that it should be a success beyond the peradventure of a doubt. However, it is expected that it will require some time to work out a definite schedule of rates.

Merchandise will have to be classified, possibly similar to that of railroads, so that the various rates may be charged different rates. The development of parcel business also will play an important part, it is believed.

"Should rates be charged as high as those by the railroads and even a percentage added, the service would be cheap," declared an Amarilloan yesterday. "One-day service to the North Plains' splendid towns is something that is to be desired."

When a contract is definitely signed for the truck line, which may be done this week, it is expected that some extensive plans will be announced. Because of the fact that any defi-

nite announcements may interfere with negotiations, it has been held best to refrain from mentioning them at this time.

Word received here indicates that North Plains merchants are just as anxious to have one-day service from Amarillo as the local jobbers and manufacturers. Such a spirit should insure splendid co-operation, according to those working on the local end of the project.
